Timing: On small engines, you normally can't adjust the timing, but that doesn't mean it can't be wrong! It is common on certain engines (Briggs and Stratton for instance) for the key holding the flywheel to the shaft to shear, (they are designed to do this to protect other parts of the engine, kind of like a fuse), and when it shears, the flywheel turns on the shaft. so you will still get a spark, but it won't be at the right time. so you should check the flywheel is in the correct position ...
